## real estate debt securitization

PLANA6715

## Class 1: Introduction to CMBS

- Market Overview
- Pooling Benefits
- Credit Enhancements
- Mortgage Math Review
- Illustrative Transaction

## Semester Progression

## Sessions Topics

| Session: <br> Date | Topics |
| :--- | :--- |
| Class 1 <br> $3 / 8$ | Introduction to RE Debt Securitization |
| $3 / 15$ | Spring Recess |
| Class 2 <br> $3 / 22$ | Credit Enhancements |
| Class 3: <br> $3 / 29$ | Structures |
| Class 4: <br> $4 / 5$ | Pricing and Valuation |
| Class 5: | Origination |
| $4 / 12$ |  |
| Class 6: <br> $4 / 19$ | Modeling |
| Class 7: | Case Study |
| $4 / 26$ |  |

## Course Description

In this course, students investigate the process of real estate debt securitization including underwriting, issuance templates, debt tranches, and ratings. The analysis and modeling of portfolios of commercial real estate loans for securitization will be undertaken with students performing individual securitization structuring. The securitization of residential mortgages will be briefly discussed.

## Course Objectives

Understand Commercial Mortgage Backed Securities and other forms of real estate debt securitization

Structure CMBS pools
Determine appropriate levels of credit enhancements
Learn to price CMBS
Interpret CMBS models

## Individual Goals

What are your objectives?
1.
2.
3.

## Market Overview

2-E. CMBS Market Outstanding

## Most Major Property Type Loans Have Been Securitized

## CMBS Balance By Property Type

## CMBS Issuance Moderated in 2016

U.S. CMBS Issuance By Year

Source: CREFC.org

## Wall of Maturities Expected in 2017

Maturing CMBS Loans By Quarter

$$
\begin{array}{ll}
\text { Current balance } & \text { No. of maturing loans } \\
\text { (left scale) }
\end{array}
$$

Z

CMBS--Commercial mortgage-backed securities.

## Why Pool Assets?

Which would you prefer to own?

## Pooling Reduces Risk

What happens when gold-colored box loses $1 / 3$ of its value?

$100 \%$ of $67 \%$

$6.25 \%$ of $97.9 \%=6.12 \%$

## Pooling Reduces Risk from Non-Systematic Events

$\square$ What happens when gold box loses $1 / 3$ of its value?

$1 \%$ value declines to $0.9967 \%$
$33 \%$ loss vs. $3.3 \%$ loss vs. $0.33 \%$ loss

. $1 \%$ value declines to $0.09967 \%$

## Expected Versus Realized Loss

- If the probability of loss is $2 \%$

What is the expected loss of each pool assuming no recovery for a given loss?
Answer: 2\%
$\square$ What is the loss experience if one investment defaults assuming no recovery for the given loss?

- One loan - $100 \%$ !
- 100 loans - $1 \%$
- 1,000 loans $-0.1 \%$

## Pooling Reduces Expected Losses from Idiosyncratic Events

- Tail Risk--small probability of occurring

## Pooling Benefits

- $100 \%$ of one loan or $1 \%$ of 100 loans
- Diversification
- Liquidity
- Tranching
- Risk selection
- Subordination
$\square$ Credit ratings

## Securitization Overview

$\square$ Create asset pools (mortgages, credit cards, receivables)
$\square$ Sell ownership interests in underlying collateral

- Securities
- Pass-through certificates
- Trust shares
- Structuring/tranching
- Divided interests according to return and risk levels

## Mortgage Basics

$\square$ Secured loan

- Interest rate, maturity, amortization
- LTV
$\square$ First lien, second lien
- Fixed- or floating-rate
- Payments-interest and principal
$\square$ Collateral

# CMBS Process and Participants 

Source: CRE Finance Council: CMBS E-Primer, 2015

## Risk Transfer

$\square$ Lender sells loan

- Mortgage brokers have no ownership interest
$\square$ Originator/sponsor sells or arranges for sale of loans to the trust or SPV
$\square$ Trusts issues and sells certificates and equity to fund loan acquisition
- Certificates represent interests in the cash flow generated by the underlying mortgages

## Sample CMBS Structure

## \$1.1bn JPMCC 2017-JP5

J.P. Morgan Chase Commercial Securities Mortgage Trust Corp., 2017-JP5

| Stack Thickness | Tranche Rating | Enhancement |
| :---: | :---: | :---: |
| 70.0\% | AAA Super Senior |  |
|  | (not drawn to scale) |  |
| 6.500\% | AAA | 30.00\% |
| 4.750\% | AA- | 23.50\% |
| 5.125\% | A- | 18.75\% |
| 3.375\% | BBB | 13.625\% |
| 2.500\% | BBB- | 10.25\% |
| 2.625\% | BB- | 7.75\% |
| 1.625\% | B | 5.125\% |
| 3.500\% | Equity | 3.50\% |
| 100.0\% |  | 0.00\% |

## AAA Tranches Are Paid First

$\square$ Choosing teams-first pick usually the strongest

- Last to be picked may be most uncertain

## Mortgage Basics Review

- Example: $\$ 100,000,5 \%, 30$-year mortgage

Monthly Payment Components

Principle Balance

## Mortgage Payment Factor

- Calculator
- PV $=(\$ 100,000)$

ㅁ i $=5 \%$ or $5 \% / 12$
ㅁ $\mathrm{n}=30$ or $30 \times 12$

- Pmt?
$\square$ Excel: payment =pmt(rate/(pmts/year), nper, PV, FV)
$\square$ Payment $=$ Principal $\times\left[\frac{\text { int rate } \times(1+\text { rate })^{\# \text { of payments }}}{(1+\text { rate })^{\# \text { of payments }-1}}\right]$

## Mortgage Payment Calculation

What is the regular payment due on a $\$ 100,000,30$-year loan with a $5 \%$ interest rate?

$$
\begin{aligned}
& \$ 100,000 \times \frac{5 \% / 12 \times(1+5 \% / 12)^{(30 \times 12)}}{(1+5 \% / 12)^{(30 \times 12)}-1} \\
& =\$ 537 \text { per month }
\end{aligned}
$$

## Mortgage Basics Review

| Period | Beginning <br> Balance | Payment | Interest | Principal | Ending <br> Balance |
| :---: | ---: | ---: | ---: | ---: | ---: |
| 1 | $\$ 100,000$ | $\$ 537$ | $\$ 417$ | $\$ 120$ | $\$ 99,880$ |
| 2 | $\$ 99,880$ | $\$ 537$ | $\$ 416$ | $\$ 121$ | $\$ 99,759$ |
| 3 | $\$ 99,759$ | $\$ 537$ | $\$ 416$ | $\$ 121$ | $\$ 99,638$ |
| 4 | $\$ 99,638$ | $\$ 537$ | $\$ 415$ | $\$ 122$ | $\$ 99,516$ |
| 5 | $\$ 99,516$ | $\$ 537$ | $\$ 415$ | $\$ 122$ | $\$ 99,394$ |
| 6 | $\$ 99,394$ | $\$ 537$ | $\$ 414$ | $\$ 123$ | $\$ 99,272$ |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
| 355 | $\$ 3,174$ | $\$ 537$ | $\$ 13$ | $\$ 524$ | $\$ 2,651$ |
| 356 | $\$ 2,651$ | $\$ 537$ | $\$ 11$ | $\$ 526$ | $\$ 2,125$ |
| 357 | $\$ 2,125$ | $\$ 537$ | $\$ 9$ | $\$ 528$ | $\$ 1,597$ |
| 358 | $\$ 1,597$ | $\$ 537$ | $\$ 7$ | $\$ 530$ | $\$ 1,067$ |
| 359 | $\$ 1,067$ | $\$ 537$ | $\$ 4$ | $\$ 532$ | $\$ 535$ |
| 360 | $\$ 535$ | $\$ 537$ | $\$ 2$ | $\$ 535$ | $\$ 0$ |

## Commercial Mortgages

- Short-to-medium-term maturities
- Full amortization, or
$\square$ Partial amortization or interest-only with balloon payments
- Example:
\$10mm, 4.8\%, 5-year maturity, 15-year amortization
Payment $=$ ?
Interest and principal payment at a given date?
Due at maturity $=$ ?

## Commercial Mortgages

$\square$ Solution, part 1:
\$10mm, 4.8\%, 5-year maturity, 15-year amortization
Payment formula in excel:
=pmt(rate/payments per year, total \# of payments, loan value)
\$78.041k per month
and
$\$ 950.44 \mathrm{k}$ per year
$\square$ How much interest and principal is paid with the last monthly payment, excluding the remaining principal repayment?

## Commercial Mortgages

- Solution, Part 2:
\$10mm, 4.8\%, 5-year maturity, 15-year amortization
In Excel:
- Interest Payment
= ipmt(rate/payments per year, payment number, total number of payments, initial loan value)
$\$ 29.90 \mathrm{k}$ with the $60^{\text {th }}$ payment
- Principal Payment
=ppmt(rate/payments per year, payment number, total number of payments, initial loan value)
$\$ 48.14 \mathrm{k}$ with the $60^{\text {th }}$ payment (excluding balloon repayment)

## Commercial Mortgages

$\square$ What is the remaining principal balance at maturity (or at the end of any other period)?
\$10mm, 4.8\%, 5-year maturity, 15-year amortization

In Excel:
$\square$ Future principal balance using constant payments =FV(rate/payments per year, payment number, payment, initial loan value)
$\$ 7.426 \mathrm{~mm}$ remaining after 60 payments

## Commercial Mortgages

$\square$ What is the loan LTV at maturity for a $70 \%$ LTV Ioan at origination?
\$10mm, 4.8\%, 5-year maturity, 15-year amortization

- Initial property value $=\$ 10 \mathrm{~mm} / 70 \%=\$ 14.3 \mathrm{~mm}$
$\square$ Balance due after five years $=\$ 7.4 \mathrm{~mm}$
Ending LTV $=\$ 7.4 / \$ 14.3=52 \%$

## CMBS Risks

$\square$ General bond risks

- Credit, interest rate, liquidity, inflation, duration
$\square$ CMBS-specific additional risks
- Prepayment
- Duration
- Convexity
- Negative Convexity

## Bond Math Review

- Inputs
- Interest rate
- Present value
- Future value
- Payment
- Number of periods

Need 3 of the 4 components to calculate the missing item

## Bond Math Practice

$\square$ What happens if:

- Rates increase 100bp
- Rates decline 100bp
$\square$ How much does price change when rates rise
- When rates decline?
$\square$ How does the expected return (yield to maturity) change if the bond price declines, increases?
- Assume a $1 \%$ change in price for each year remaining until maturity

## Recent Offering-JPMCC 2017-JP5

Hilton Hawaiian Village Loan

| Capital Structure |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Note | Balance | Debt Per Room | Fitch DSCR | Fitch LTV | Fitch DY |
| A-2-A-2 (Trust) | \$80.0M | \$243,566 | 1.68 | 61.0\% | 16.47\% |
| Remaining A Notes | \$616.6M | \$243,566 | 1.68 | 61.0\% | 16.47\% |

## Questions?

## Major topics

- Market overview
- Benefits of pooling
- Credit enhancements
- Bond and CMBS risks

## Review

- CMBS market is large and well established
- Benefits of securitized debt include liquidity and risk selection
- Highly-rated tranches receive principal and interest before subordinated classes
- Lowest-rated tranches absorb shortfalls and losses firs $\dagger$

## Class 1: Introduction to CMBS

Steven G. Bloom, CFA, steven.bloom@columbia.edu

[^0]:    Source: Fitch Ratings, Presale Report
